

The NF-Walker - a dynamic aid for standing and walking.

It's often difficult to find a properly, active aid for standing and walking for children with a movement disorder when they need to have their hands free.

The fun of movement needs to be connected to a good correction of the posture

With the NF-Walker you find possibilities to support your child's fun of movement and still take care of physiological important aspects.

The children stand upright without the support of a saddle, bearing their bodyweight with their feet. The vegetative system is stimulated as well as the sense of balance and the awareness of the body. The children stand at the same height as same-aged children and experience the world from a new perspective.

There is also a lot of equipment available, the NF-Walker can be upgraded with to adjust it to the special needs of every child.

We would be pleased to inform you about all details and possibilities of the NF-Walker (Fax).

Our team is available for you at any time whether in the institution or at home.

Why the NF-Walker?

- ✓ More integration in everyday life by free movement for hands and arms and more mobility.
- ✓ Returning to upright position according to the principle of "stable mobility".
- ✓ Physiological stance is enabled, bearing the whole bodyweight on the feet without a saddle.
- ✓ Prevention and limitation of postural defects, malposition of the joints and contractures.
- ✓ Highest precision and high-quality material.
- ✓ TÜV-certified medical approved aid
